When I applied the spherical model to social/moral/civilizational ideas, it fit there remarkably well. So I overlaid it on economic ideas, and it made sense there as well. Four theoretical models are supported by PROC KRIGE2D: the spherical, Gaussian, exponential, and power models. For the first three types, the parameters are as follows: Spherical Model as the Limit of Infinite Spin Dimensionality Robust Bayesian Inference in Isotropic Spherical Models - jstor Fisher, Privman : First-order transitions in spherical models: finite-size scaling. Abstract. A one parameter family of models is considered which for zero value of the parameter  $\alpha$  reduces to the familiar spherical model.
